

New Orleans Wetland Restoration Workshop

Monday, March 3, 2008

This all day workshop is an opportunity to find out about the many exciting opportunities for the sustainable redevelopment of New Orleans. The students organizing this event come from a range of disciplines but are all part of the Water Resources Management (WRM) practicum.

The WRM project is working to restore the Bayou Bienvenue triangle, directly north of the Lower 9th Ward, to a healthy wetland ecosystem. This is the second year in a multi-year project that aims to engage neighborhood organizations and residents to develop a sustainable restoration plan for the wetland and community.

Our guest speakers will be discussing the role of wetland restoration in the long term viability of New Orleans and the Lower 9th Ward's Vision for an economically, socially, and environmentally sustainable community.
